### Greenwood Farmers' Club.

An unusually good attendance considering the extremely busy time on the farm marked the meeting of the Greenwood Farmers' Club, Friday, May 16th, at the home of Mr. and Mrs. Ralph Young. Dinner was served at noon, and after a social hour a program was opened by "America" sung by the club. Prayer by Elder Turban followed. Marguerite Nye then pleased the audience very much by a recitation, after which Miss Katherine Sleneau spoke on "The County Library." Miss Sleneau outlined the splendid progress of the movement during the last year, and offered to Fargo the opportunity of establishing a branch library. A committee was at once appointed consisting of Mrs. William Wurzel, Miss Etta Hewitt and Rev. Turban to make arrangements for location, etc. The response of the club regarding this matter was most hearty, everyone feeling that Fargo could not afford to allow such an opportunity to pass.

Mr. Taylor, the representative of the Buckeye Ditcher Company, then spoke on ditching machinery, operating costs, and drainage matters in general. This called forth some lively discussions among those present. A piano solo by Mrs. Ira Huston was very much enjoyed.

Resolved, That the members of the Greenwood Farmers' Club extend to the bereaved family their sincere and heartfelt sympathy, and be it further Resolved, That these resolutions be spread on the minutes of the club and a copy of the same be sent to the bereaved family.

### "Take All" and "Flag Smut"

Notice has just been received from the Michigan Agricultural College regarding the discovery of two very serious wheat pests near Granite City, Illinois, and Laporte, Indiana. These are known as "Take-all" and "Flag Smut," and having been very prevalent in Australia, they are believed to have been introduced from that continent. The two diseases were found together in the same field, and it seems evident that they were brought in on the seed. Dr. G. H. Coons, of the Michigan Agricultural College gives the following description of the new pests:

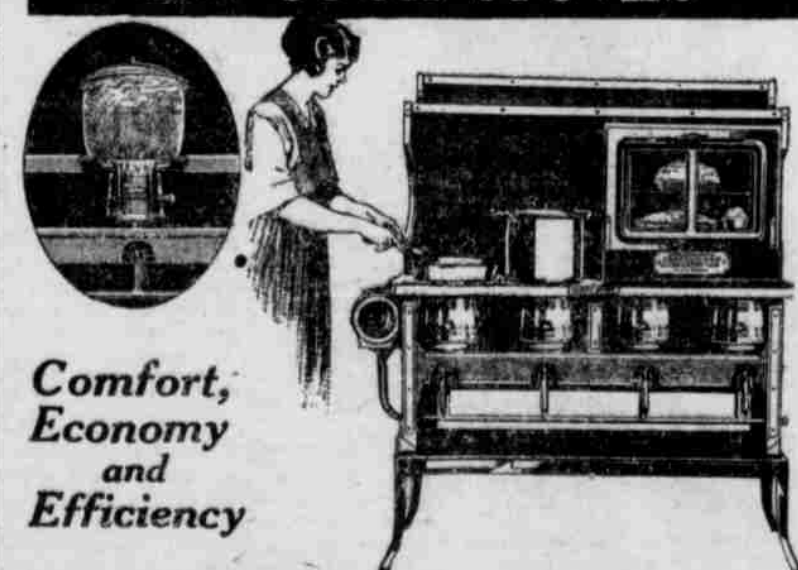

"Take-all" is a fungous root rot which has not heretofore been known in the United States, but is extremely prevalent in Australia and is undoubtedly one of the worst wheat diseases. In its attack on wheat it causes the plants to remain stunted, the diseased stools sprout on the ground and look like quack grass. Instead of producing a normal head, the shoots are replaced by wiry, spindling outgrowths which never amount to anything. It is characteristic that the diseased parts are discolored and rotted. A mahogany brown color is a very noticeable condition.

"Flag Smut" is readily recognized by the black streaks along the leaves. The Doctor states that near St. Louis he saw fields of eighty acres rendered useless, and that the disease had already become wide-spread in two townships. He considers the situation critical, and the college and United States Department of Agriculture are trying to rapidly assemble information which will enable them to control these pests. He states that already two suspicious cases have been reported in Michigan, and that they are planning to inspect all such fields brought to their attention.

All wheat growers are urged to be on the outlook for these diseases and report any abnormal conditions to the County Agricultural Agent at Port Huron.
